One idea.
A whole engineering team.

Coordinated work.
Visible progress.

One Idea. Multiple Agents. One Software Factory.

SPECIALIZED OWNERSHIP

Every role owns a clear outcome.

Product

Acceptance criteria

Architect

Contracts + tasks

Developer

Code + unit tests

QA

Feature verification

EXAMPLE · TASK-MANAGER REQUEST

“Add tasks” → define behavior → design contract → implement → test

CONTROLLED ORCHESTRATION

The workflow has an authority.

Deterministic orchestrator

Dependencies decide readiness.

File lanes define ownership.

Budget constrains execution.

EXAMPLE · BEFORE PARALLEL DEVELOPMENT

Overlapping file lanes? Serialize the tasks.

PARALLEL EXECUTION

Build compatible tasks together.

Ready tasks · independent lanes · configurable concurrency

T1 / WORKTREE A

Proxy + replay server

Backend access

T2 / WORKTREE B

Reducer + handoffs

State transitions

T3 / WORKTREE C

HUD + controls

Frontend interaction

Checks + policy review → Serialized merge → Main gate

Actual task examples from the Living Foundry recording. No speedup benchmark claimed.

See what each agent is doing.

WHO

Selected agent

WHAT

Task + tool activity

WHERE NEXT

Review and QA stages

Actual frontend · recorded sample replay · expandable activity

INSPECTABLE OUTCOMES

“Done” should come with evidence.

01

Gate passed

Recorded check event

→

02

Review approved

Recorded verdict

→

03

Merged

Task status + sample state

ACTUAL SAMPLE · T1 / PROXY + REPLAY SERVER

A traceable task outcome, with its limits visible.

This trace does not establish feature-level QA acceptance or linked deployment success.

BOUNDED RECOVERY

Failure gets a next step.

ATTEMPT 1

Review rejected

Cleanup captures stale refs.

→ feedback

ATTEMPT 2

Review rejected

Existing effects replay on mount.

→ feedback

ATTEMPT 3

Approved + merged

Recorded task outcome.

ACTUAL SAMPLE · T5 / PACKETS + EFFECTS LAYERS

Retry → escalate when required → park when exhausted.

Keep humans in the driving seat.

Stop. Resume. Iterate.

ILLUSTRATIVE OPERATOR NOTE

“Make task creation keyboard accessible.”

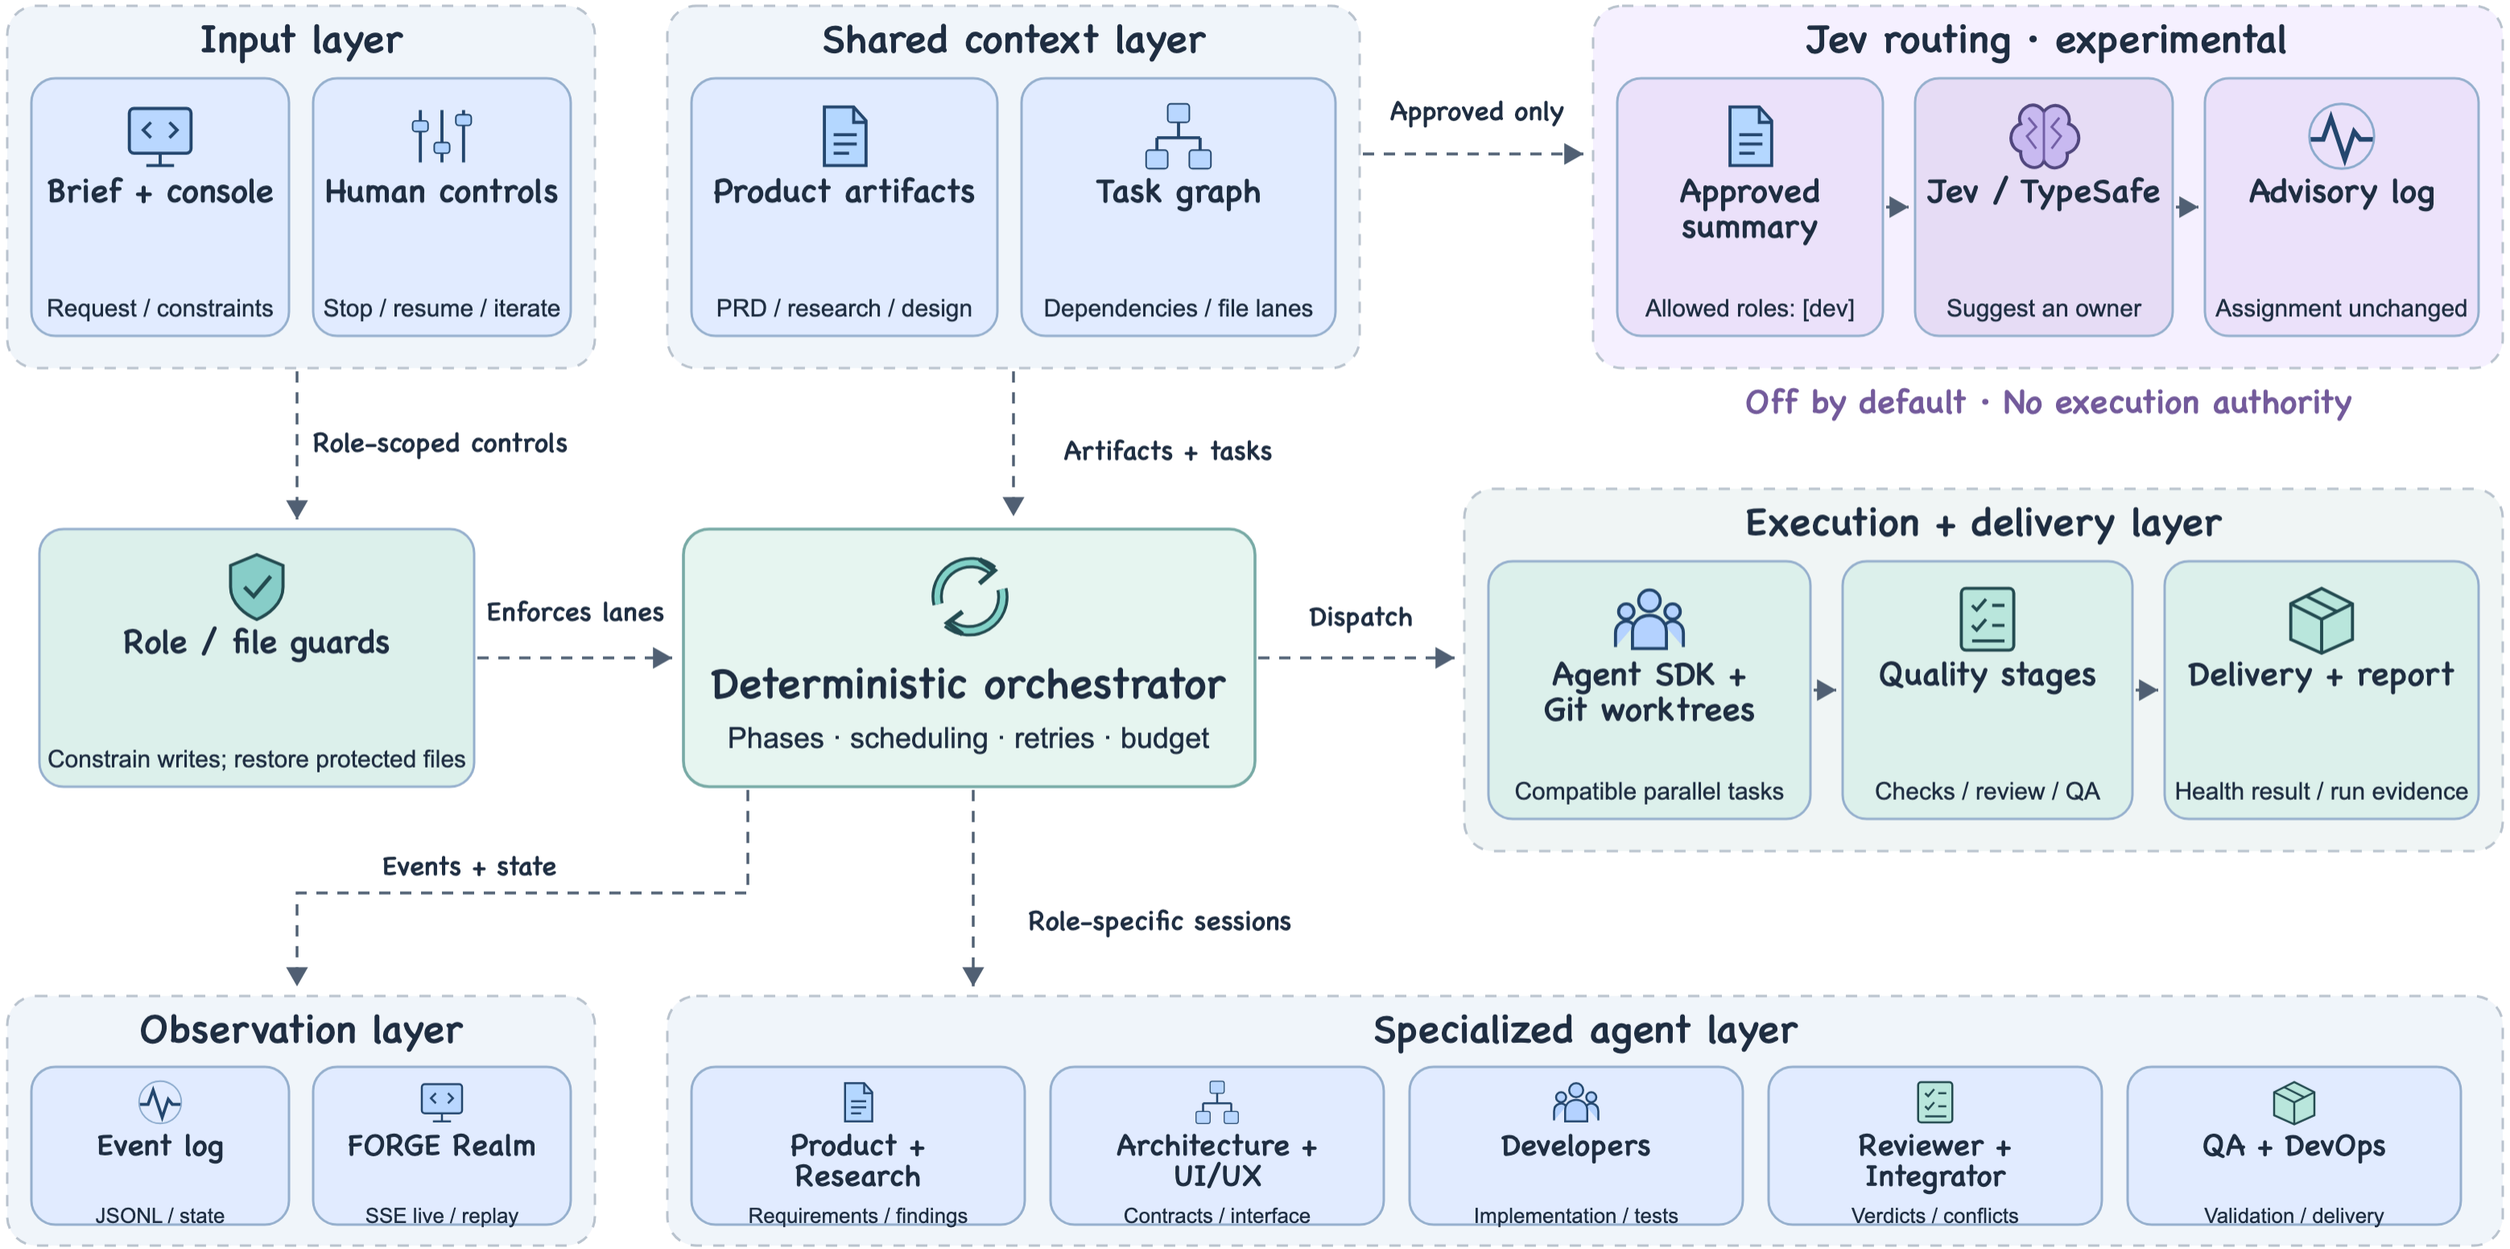

Notes reach the agent on its next turn.

Lifecycle controls + agent notes + backlog. Mandatory approval at every phase is not implemented.

FORGE · Agentic Software Factory

Specialized agents. Deterministic coordination.

Jev sees an approved summary and suggests an owner; today dev is its only candidate.

Follow the work. Inspect the evidence.

KANBAN WORKFLOW

Board → handoffs → timeline

AGENT DOCUMENTS

PRD → architecture → design

QUALITY + DELIVERY

QA → security → deployment

RUN EVIDENCE

Report → metrics → lessons

OPEN RUN CONSOLE ↗

Wheels2Go replay · actual UI captures + real documents · edited walkthrough · no new AI execution
